

## Security Warning on Start?

Here is how to work through it

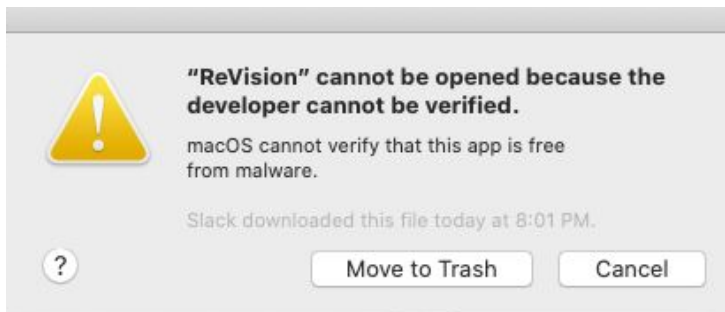

We have recently been working with both Microsoft and Apple to become recognized as a trusted developer. If you see a security warning follow these steps to begin your application. Our software can be confirmed to be properly code signed.

### Opening ReVision Applications on Mac

1. Download the ReVisionMacOS.zip file
2. Double click on it to unpack it. A folder of the same name will appear in that directory
3. Inside that folder there will be a file called ReVision. Double click it and if you see

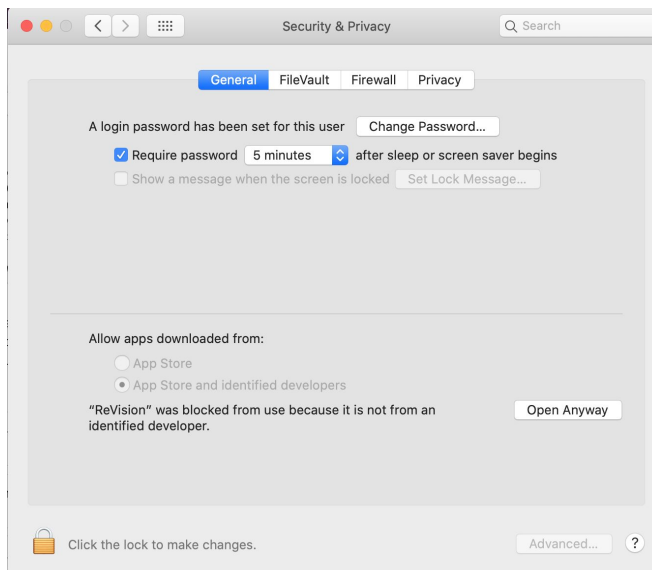

4. Select "Cancel"

5. Now, go to “System Preferences”

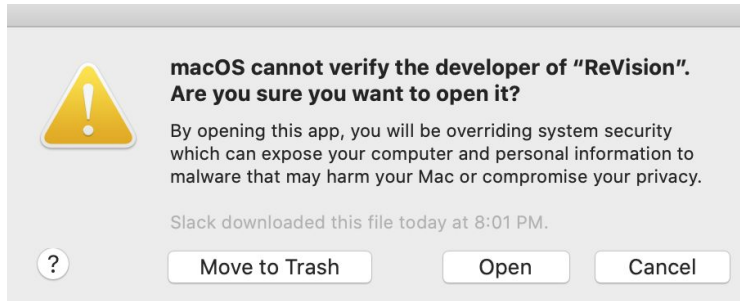

6. Choose “Security and Privacy”

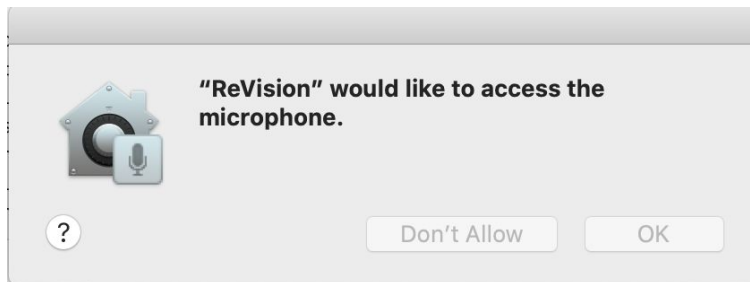

7. Choose “Open Anyway” for the ReVision Application

8. Another Popup will appear -> Choose "Open"

ReVision should now start.

Note: As part of the application starting, one final popup will appear asking you to give the application permission to access your microphone. This will allow you to talk with the other people joining you remotely. Choose "OK"

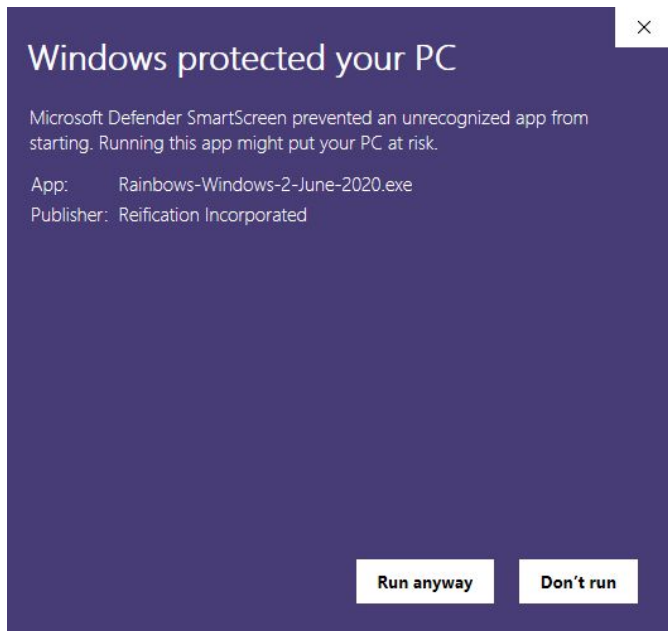

## Opening ReVision Applications on Windows

1. Download the ReVisionWindowsOS.exe
2. Double click to unpack it. If you see the following pop up

3. Click "More info," which will reveal this additional option

4. Choose "Run anyway"
